JavaScript Function Tasks (with Loops & Conditions)

Part A – Short Questions (1 mark each)

1. What is a function in JavaScript?
2. How do you define a function?
3. What is the purpose of the `return` keyword?
4. Difference between **function declaration** and **function expression**.
5. What is an **arrow function**? Give one example.
6. Can a function call another function?
7. What happens if a function doesn't have a `return` statement?
8. What is the scope of a variable declared **inside** a function?
9. Write the syntax for calling a function.
10. What does `arguments` mean inside a function?

Part B – Practical Tasks

1. **Even or Odd Function**
   Create a function that takes a number and prints whether it's even or odd.

2. **Sum of 1 to N**
   Create a function that takes a number `n` and uses a loop to find the sum of numbers from 1 to `n`.

3. **Factorial Function**
   Write a function that returns the factorial of a number using a `for` loop.

4. **Array Sum Function**
   Write a function that accepts an array and returns the sum of all numbers.

5. **Largest of Three Numbers**
   Write a function that uses `if-else` to find the largest among 3 numbers.

6. **Count Even Numbers**
   Create a function that takes an array and returns how many numbers are even.

7. **Reverse String Function**
   Write a function that takes a string and returns its reverse using a loop.

8. **Multiplication Table Function**
   Create a function that prints the multiplication table of any number given as argument.

9. **Check Prime Number**
   Create a function that checks if a number is prime or not using a loop and condition.

10. **Marks Result Function**
    Write a function that takes a student's mark and prints `"Pass"` if ≥35, otherwise `"Fail"`.

11. **Sum of Odd Numbers**
    Create a function that uses a loop to find the sum of all odd numbers from 1 to 20.

12. **Temperature Converter**
    Write a function that converts Celsius to Fahrenheit.

13. **Array Average Function**
    Write a function that calculates the average of numbers in an array.

14. **Pattern Printing**
    Write a function that prints this pattern using a loop:

```
*
**
***
****
```

15. **Check Vowel or Not**
    Create a function that takes a letter and prints if it is a vowel or consonant.
